# **Building a Regression Model in AI Platform Notebooks**

## **Overview**

In this lab, you will build and evaluate a simple linear regression model to predict AAPL closing stock prices using Scikit-Learn and BigQuery.

## **Objectives**

In this lab, you learn to perform the following tasks:

- Load data from BigQuery into a Pandas DataFrame
- Build a linear regression model in Scikit-Learn
- Use AI Platform Notebooks

## Set up your environment

### What you'll need

To complete this lab, you'll need:

- Access to a standard internet browser (Chrome browser recommended).
- Time. Note the lab's **Completion** time in Qwiklabs. This is an estimate of the time it should take to complete all steps. Plan your schedule so you have time to complete the lab. Once you start the lab, you will not be able to pause and return later (you begin at step 1 every time you start a lab).
- The lab's **Access** time is how long your lab resources will be available. If you finish your lab with access time still available, you will be able to explore the Google Cloud Platform or work on any section of the lab that was marked "if you have time". Once the Access time runs out, your lab will end and all resources will terminate.
- You **DO NOT** need a Google Cloud Platform account or project. An account, project and associated resources are provided to you as part of this lab.

- If you already have your own GCP account, make sure you do not use it for this lab.
- If your lab prompts you to log into the console, **use only the student account provided to you by the lab**. This prevents you from incurring charges for lab activities in your personal GCP account.

### **Start your lab**

When you are ready, click **Start Lab**. You can track your lab's progress with the status bar at the top of your screen.

**Important** What is happening during this time? Your lab is spinning up GCP resources for you behind the scenes, including an account, a project, resources within the project, and permission for you to control the resources needed to run the lab. This means that instead of spending time manually setting up a project and building resources from scratch as part of your lab, you can begin learning more quickly.

### **Find Your Lab's GCP Username and Password**

To access the resources and console for this lab, locate the Connection Details panel in Qwiklabs. Here you will find the account ID and password for the account you will use to log in to the Google Cloud Platform:

## Open Google Console

**Caution:** When you are in the console, do not deviate from the lab instructions. Doing so may cause your account to be blocked. [Learn more.](#)

Username

google2876526\_student@qwiklabs.n

Password

TG959yrKDX

GCP Project ID

qwiklabs-gcp-0855e773352d3560

[New to labs? View our introductory video!](#)

If your lab provides other resource identifiers or connection-related information, it will appear on this panel as well.

### Log in to Google Cloud Console

Using the Qwiklabs browser tab/window or the separate browser you are using for the Qwiklabs session, copy the Username from the Connection Details panel and click the **Open Google Console** button.

You'll be asked to Choose an account. Click **Use another account**.

## Choose an account

gcpstaging10382\_student@qwiklabs.net  
*Signed out*

gcpstaging10408\_student@qwiklabs.net  
*Signed out*

Use another account

Paste in the Username, and then the Password as prompted:

## Sign in

to continue to Google Cloud Platform

Enter your email

gcpstaging277-student@qwiklabs.net

[More options](#)

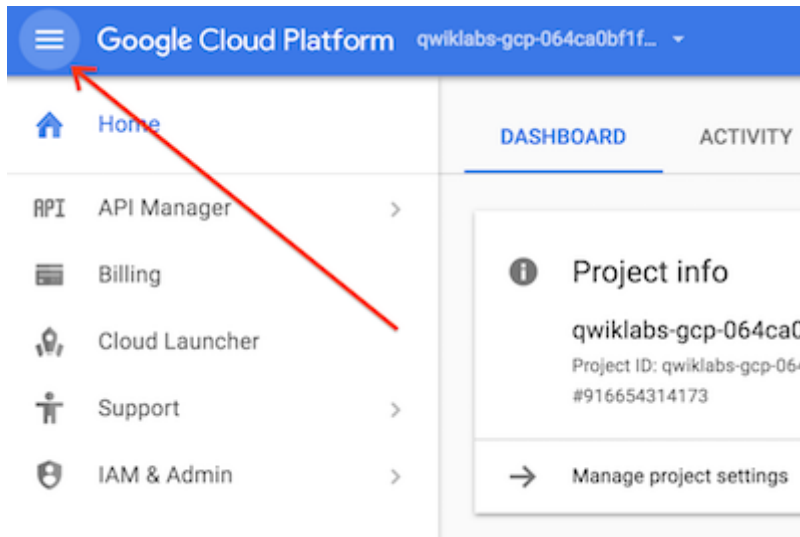

NEXT

Accept the terms and conditions.

Since this is a temporary account, which you will only have to access for this one lab:

- Do not add recovery options
- Do not sign up for free trials

**Note:** You can view the list of services by clicking the GCP Navigation menu button at the top-left next to "Google Cloud Platform" .

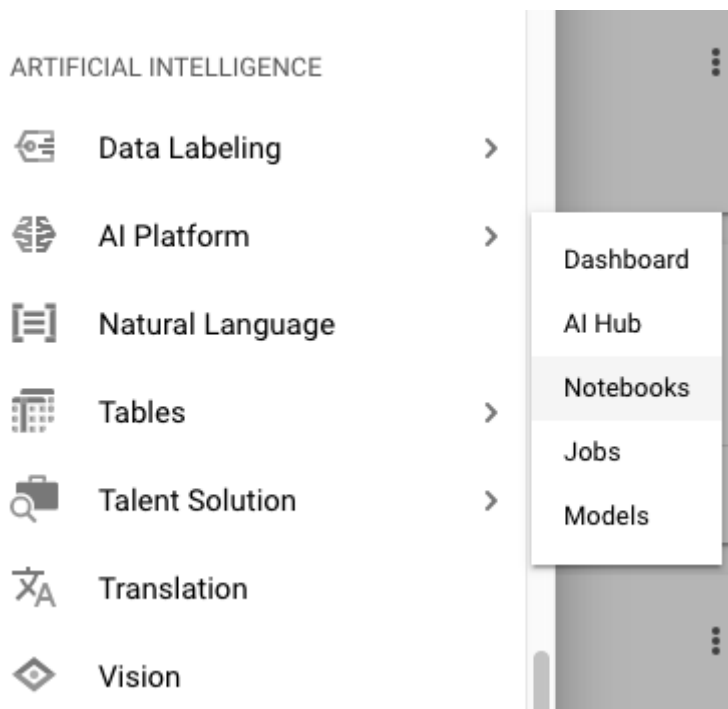

## Launch AI Platform Notebooks

To launch AI Platform Notebooks:

### Step 1

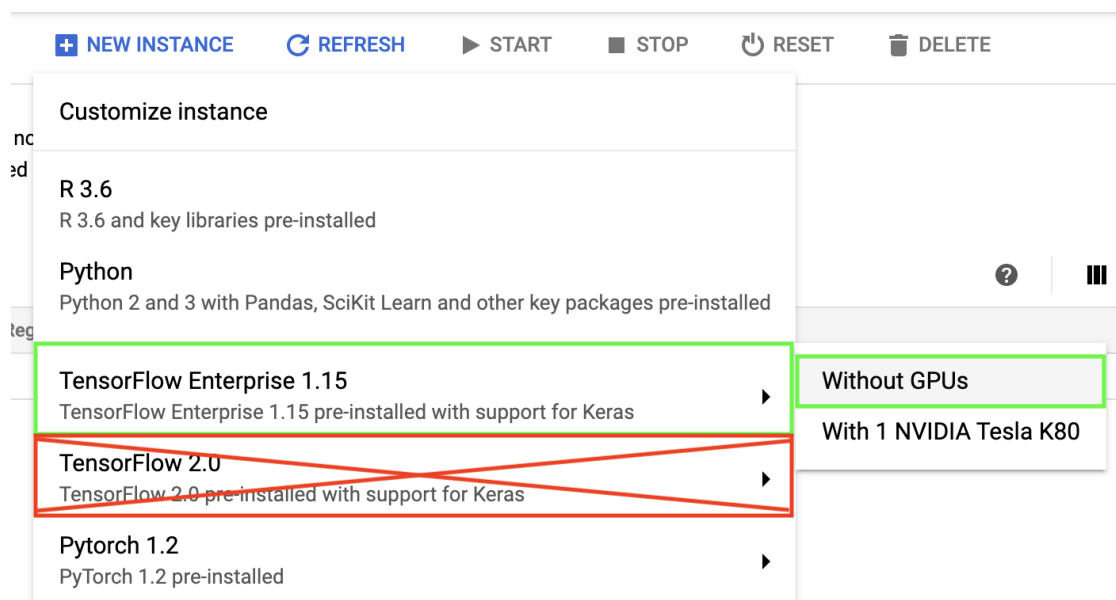

Click on the **Navigation Menu**. Navigate to **AI Platform**, then to **Notebooks**.

## Step 2

On the Notebook instances page, click [+ NEW INSTANCE](#) . Select

a 1. XX version of TensorFlow (not a 2.0) *without GPUs*. In the following example, you would select **Tensorflow Enterprise 1.15 > Without GPUs**:

Tensorflow 1.XX versions change semi-frequently, so the version you pick may be different.

In the pop-up, confirm the name of the deep learning VM and click **Create**.

## New notebook instance

Instance name \*

tensorflow-20191107-145738

### Environment:

Image: TensorFlow Enterprise 1.15

Packages: python2, python3, scikit-learn, pandas, and nltk.

### Machine configurations: ?

Region and zone: us-west1-b

Machine type: 4 vCPUs, 15 GB RAM

Boot disk: 100 GB Disk

### Networking:

Subnetwork \*

default(10.138.0.0/20)

External IP: Ephemeral(Automatic)

### Permission:

Compute Engine default service account

### Estimated cost: ?

\$99.89 monthly, \$0.137 hourly

CUSTOMIZE

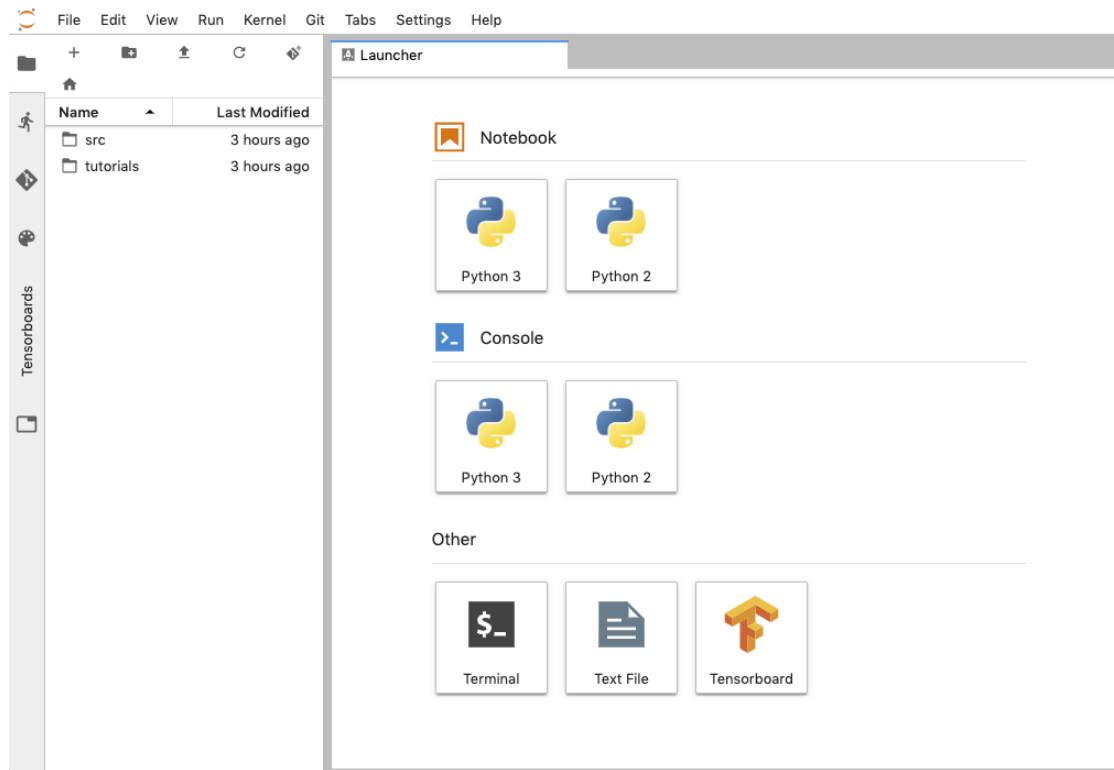

CANCEL

CREATE

The new VM will take 2-3 minutes to start.

## Step 3

Click **Open JupyterLab**. A JupyterLab window will open in a new tab.

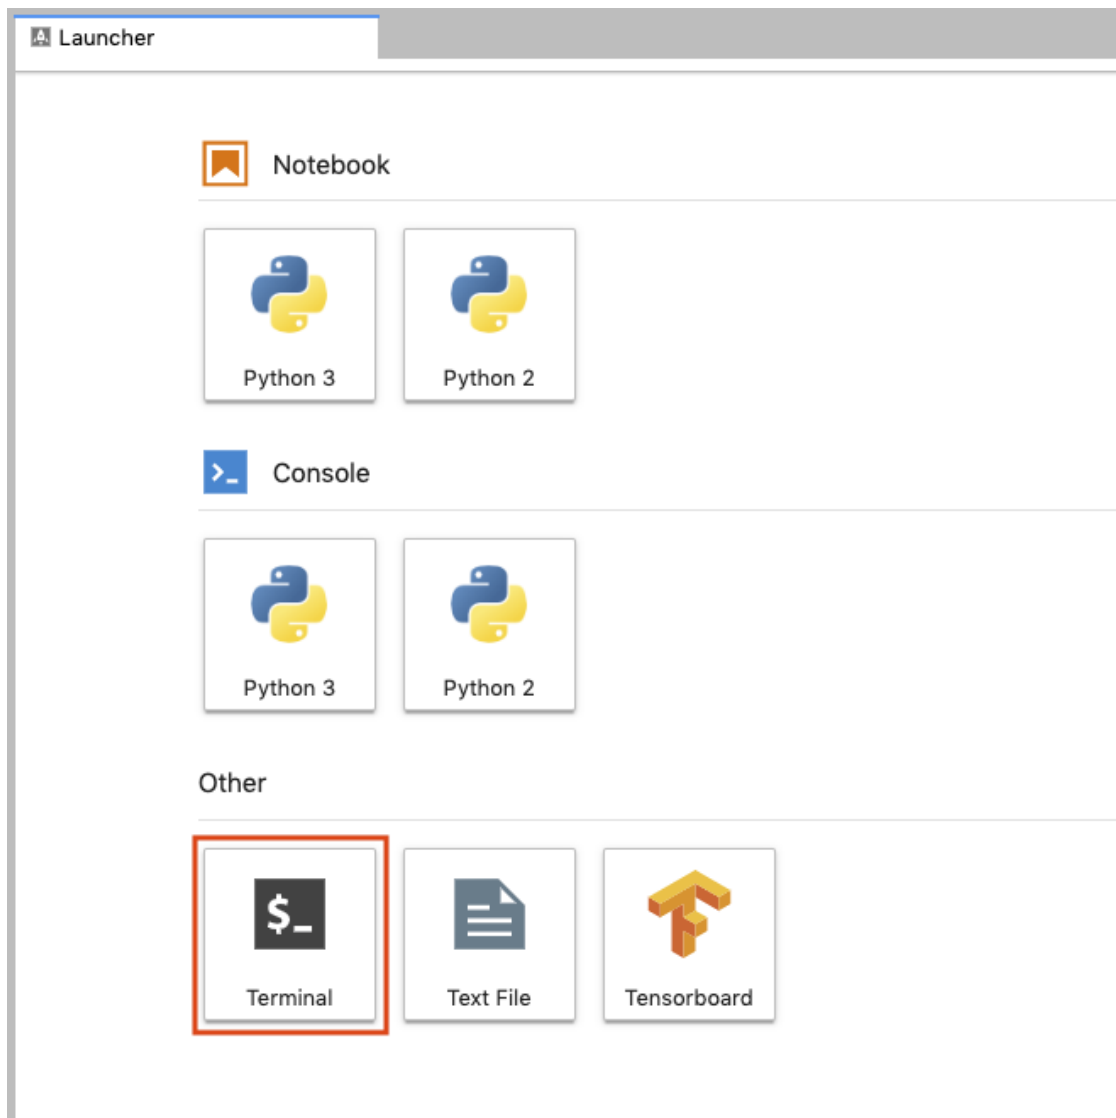

## Clone Course Repo within your AI Platform Notebooks Instance

To clone the `training-data-analyst` notebook in your JupyterLab instance:

### Step 1

In JupyterLab, click the Terminal icon to open a new terminal.

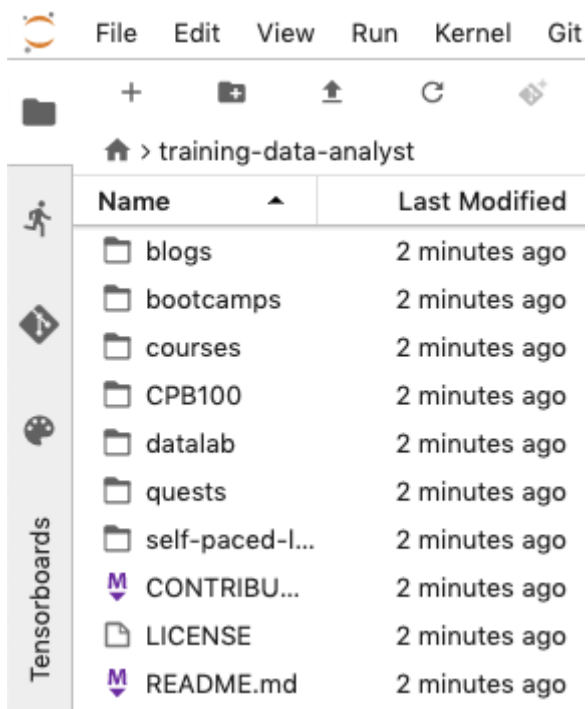

## Step 2

At the command-line prompt, type in the following command and press Enter.

```
git clone https://github.com/GoogleCloudPlatform/training-data-analyst
```

## Step 3

Confirm that you have cloned the repository by double clicking on the `training-data-analyst` directory and ensuring that you can see its contents. The files for all the Jupyter notebook-based labs throughout this course are available in this directory.

# Regression Model for AAPL Closing Price

## Step 1

In the notebook interface, navigate to **training-data-analyst > courses > ai-for-finance > practice** and open **aapl\_regression\_scikit\_learn.ipynb**.

## Step 2

In the notebook interface, click on **Edit > Clear All Outputs** (click on Edit, then in the drop-down menu, select Clear All Outputs).

## Step 3

Read the narrative and execute each cell in turn. Complete each cell with a # `TODO` comment. If you get stuck, feel free to consult the solutions file by opening **training-data-analyst > courses > ai-for-finance > solution > aapl\_regression\_scikit\_learn.ipynb**.

## Next Steps / Learn More

- Official documentation for AI Platform

Notebooks: <https://cloud.google.com/ai-platform/notebooks/docs/>

## End your lab

When you have completed your lab, click **End Lab**. Qwiklabs removes the resources you've used and cleans the account for you.

You will be given an opportunity to rate the lab experience. Select the applicable number of stars, type a comment, and then click **Submit**.

The number of stars indicates the following:

- 1 star = Very dissatisfied
- 2 stars = Dissatisfied
- 3 stars = Neutral
- 4 stars = Satisfied
- 5 stars = Very satisfied

You can close the dialog box if you don't want to provide feedback.

For feedback, suggestions, or corrections, please use the **Support** tab.
